

# PLANETARIUM

The planetarium uses a new-generation digital system to project simulations of, for example, a starry sky... don't miss it!

The Planetarium is a new-generation digital optical system that allows images or films to be projected onto a hemispherical screen (for instance, a dynamic simulation of a starry sky, or a film explaining how eclipses happen). It can be used to illustrate any astronomical subject, for customised sessions that use spectacular full-dome projection.

The Planetarium is situated on the Route du Vieux Village, in an old 19th-century granary called "Stellarium". It is easily recognisable by its special window shaped like a crescent moon, on the side of the building that faces the road.

## Description

- Dates and times can be seen on the website of the OFXB
  - Meeting point : at the Planetarium
  - Duration of the visite : 60 minutes
  - CHF 10.- / person
- Bookings : tourist office

## CONTACT

Stellarium  
3961 St-Luc
